15.0	15.0	73	5	18	22	425

The table serves to determine the quantity for different package sizes.

The basis is the loosened volume according to DIN EN 12580.

Depending on the size of the root ball to be potted and the compaction when potting with a potting machine or by hand, the values must be corrected.

For applications or cultures that are not included in the list, please contact our service
